AMENDMENTS TO THE CLAIMS

Please add or amend the claims to read as follows, and cancel without prejudice or disclaimer to resubmission in a divisional or continuation application claims indicated as cancelled:

1. (Currently amended) An attachable closure comprising:
a thin flexible material having attachable area and unattachable area to be placed over an opening in a package formed on at least part of its area and having a cut formed across at least part of its area;
sealing means having sealing edges formed in said unattachable area engagable edges connected to the edges of said cut so as to allow for engaging and disengaging said engagable edges from one another; and
a zipper handle for manually engaging and disengaging said sealing edges.
2. (cancelled)
3. (Currently amended) The attachable closure of ~~claim 2~~ claim 1, wherein said attachable area is attachable to a package by one of adhesive, heat bonding and chemical bonding.
4. (Currently amended) The attachable closure of claim 1, wherein said thin flexible material comprises two parts each of said parts having a bend along a line substantially situated in the middle of said material and parallel to one edge of said part and separating each of said parts to a first and a second area, said parts are placed so that their bend lines are parallel and close to each other, their first areas are parallel and close to each other and their second parts are bent with respect to their first part; and
wherein said sealing edges ~~engagable edges~~ are formed parallel to said bend lines at the free end of said first and second areas.
5. (Currently amended) A method for sealing a package comprising:
~~providing an opening a cut~~ in one side of said package; and
attaching a resealable closure substantially over said cut, said resealable closure having ; and
~~providing activation means a zipper handle; and~~

resealing said closure by means of said zipper handle.

6. (Currently amended) The method of claim 5, wherein said ~~step of attaching is performed during the preparation of~~ precedes full forming of said package.
7. (Currently amended) The method of claim 5, wherein said ~~step of attaching is performed follows full forming of said~~ after said package is filled with a content.
8. (Currently amended) A resealable package comprising:
 - a package having an opening in one of its walls; and
 - a ~~resealable~~ resealable patch, comprising:
 - a thin flexible material having attachable area and unattachable area to be placed over an opening in a package formed on at least part of its area and having a cut formed across at least part of its area; and
 - sealing means having sealing edges formed in said unattachable area
 - ~~engagable edges connected to the edges of said cut so as to allow for engaging and disengaging said engagable edges from one another; and~~
 - a zipper handle for manually engaging and disengaging said sealing edges.
9. (Cancelled)
10. (Currently amended) The resealable package of ~~claim 9~~ claim 8, wherein said attachable area is attachable to said package by one of adhesive, heat bonding and chemical bonding.
11. (Currently amended) The resealable package of claim 8, wherein said thin flexible material comprises two parts each of said parts having a bend along a line substantially situated in the middle of said material and parallel to one edge of said part and separating each of said parts to a first and a second area, said parts are placed so that their bend lines are parallel and close to each other, their first areas are parallel and close to each other and their second parts are bent with respect to their first part; and
 - wherein said ~~engagable~~ sealing edges are formed parallel to said bend lines at the free end of said first and second areas.
12. (New) The method of claim 5, further comprising unsealing said closure by means of said zipper handle.
